May 11, 1984

Dear Sir:

Mr. Robert Naylor, William M. Wilson's Sons, Inc., Data Processing staff, has performed Assembler Language Communications work on the IBM Series/1, using the Channel Attach Protocols to and from an IBM 3081 ('XA' Operating System).

Mr. Naylor's technical expertise and tenacity in identifying problems and implementing solutions played a key role in the successful interface between the two systems for the Pennsylvania Department of Transportation's Automated Fuel Control Systems.

His diplomacy in handling some difficult chart situations was commendable.

The documentation produced (program, test and narrative) was heavily used by other programmers.

If you have any questions on this letter, please contact me.

Very truly yours,

WILLIAM M. WILSON'S SONS, INC.

A handwritten signature in cursive script that reads "Richard E. Donohue".
